OTHER:

=====

These IP addresses have certificate warnings or other unusual connections:

www.intellichub.com	97.74.235.131	invalid security certificate
meet.jit.si	52.3.28.142 52.206.163.183	invalid security certificate, and problems with connection for audio-chat-video
publicintelligence.net	148.251.153.228	invalid security certificate
admin.qsl.net/index.php dx.qsl.net www.qsl.net	69.16.227.189	- invalid security certificate
Schneier on Security	66.33.204.254	invalid security certificate
soylentnews.org	45.56.123.192	invalid security certificate
SurvivalBlog.com	185.8.177.142 185.8.177.173	SurvivalBlog Direct IP Access Page. Click link on that page to get to Current location of SurvivalBlog. Ignore invalid security certificate to connect to SurvivalBlog.com
tmwsd.ws www.thismessagewillselfdestruct.com	69.16.194.171	invalid security certificate
Unseen.is	82.221.106.173 82.221.107.87	- invalid security certificate - invalid security certificate
vid.me	52.52.151.218	- invalid security certificate - hosted on Amazon.com
wikileaks.org	95.211.113.131	invalid security certificate

My experience with the few that I've tested is that these work, if you choose to ignore the security certificate warning.

My understanding is that the security certificate agency either hasn't received a certificate from the website owner, or has removed certificate approval of the website (censored?).

=====

IP LOOKUP:

=====

Free services that will allow you to find the IP addresses to other sites.

IP Lookup Site: <http://www.webtoolhub.com/tn561350-reverse-ip-domain-lookup.aspx>

IP Lookup Site: <http://ipaddress.com/>

Linux command that finds the IP address of websites:

to determine the IP address of a domain, first open a terminal window, then use
nslookup *domainname.com*

For example,

```
~$ nslookup knoppix.net
Name: knoppix.net
Address: 74.116.2.149
```

Microsoft (Windows) command that finds the IP address of websites:

to determine the IP address of a domain, first open a Command Line window, then use
ping *domainname.com*

For example,

```
C:\>ping knoppix.net
Pinging knoppix.net [74.116.2.149] with 32 bytes of data:
Reply from 74.116.2.149: ...
```

Finding hidden IP: To find the IP of a website that's protected by a proxy, if the website has been poorly configured then the following address methods to see if they aren't properly hidden:

```
ping ftp.domainname.com
ping cpanel.domainname.com
ping mail.domainname.com
```

(Note that if the proxy or content distribution network has been properly configured, these methods will not find the actual IP address.)
